

Entwässerung DN 100

The diagram is a technical architectural section. On the left, a vertical structure is shown in cross-section, with a brown-colored frame. Inside this frame, there is a drainage system. A horizontal pipe is labeled 'Entwässerung DN 100'. Below it, a vertical pipe is labeled 'in Stütze'. The vertical pipe has a diameter of 't:8'. At the bottom of the vertical pipe, there is a circular component labeled 'Einbaudownlight d: 150'. The downlight is shown in a perspective view, with a semi-circular shape. The entire structure is supported by a foundation, which is shown in cross-section at the bottom. The drawing uses various line styles: solid lines for structural elements, dashed lines for hidden components, and dotted lines for reference lines. There are also some small circles and rectangles representing fasteners or components.
